

HOW TO CHECK COLOR-SHIFTING INK

- Examine the number in the lower right on the front and tilt it back and forth.
- The number should be green when viewed straight on and black when tilted.
- Look for a visible color change from green to black, not just for shininess.
- Many counterfeits are shiny, but don't change color like real currency.
- There is no color-shifting ink on the \$5.00 denomination.
- Always tilt suspect currency next to genuine to see differences.

To report counterfeit currency, contact your local police or the U.S. Secret Service at _____.
